

xpe::core::cApp::LockFPSFrom
Config

xpe::core::cApp::Run

xpe::core::cTime::SetFps

```
graph LR; A["xpe::core::cApp::LockFPSFrom<br/>Config"] --> C["xpe::core::cTime::SetFps"]; B["xpe::core::cApp::Run"] --> C;
```

The diagram illustrates a function call relationship. Two source functions, 'xpe::core::cApp::LockFPSFrom Config' and 'xpe::core::cApp::Run', are shown in white boxes on the left. Blue arrows point from each of these boxes to a target function box on the right, 'xpe::core::cTime::SetFps', which is shaded gray. This indicates that both source functions call the target function.
